

**CITY OF BERESFOED
MUNICIPAL ELECTRIC
RESIDENTIAL ELECTRIC WATER HEATER REBATE PROGRAM
UPDATED 10/17/05**

PROGRAM REQUIREMENTS

1. The electric water heater must be new and be of a 40-gallon capacity or larger.
2. The customer must allow the utility to install and maintain a load management controller on each water heater, which would allow 100% control during peak demand periods.
3. The rebate is good for the replacement of an existing gas hot water heater as well as for new construction. The new water heater must be purchased from a Beresford retailer or licensed plumber. The existing gas water heater must be removed from the premises. An inspection will be completed by the Beresford Municipal Electric Department.
4. Only one rebate is allowed per household. (If your residence has two or more hot water heaters, only one rebate will apply)
5. The replacement of an existing electric water heater does not qualify for the rebate.

After receiving a paid receipt from the customer the utility will inspect the installation and install a load management controller. A rebate in the amount of \$3/gallon will be available for all qualified installations. (maximum rebate amount \$150) An additional rebate of \$50 is available if additional electrical work is required for the installation. (receipt required and work must be completed by a licensed electrician)

I _____ understand and agree to the above requirements and make application for a water heater rebate for the following amount \$_____.

I also make application for a rebate of \$_____ for additional electric work required for the installation of the new electric water heater.
